DATA ANALYST PORTFOLIO / MICROSOFT EXCEL

HR Workforce & Salary Insights

Interactive dashboard | Pivot Tables | Applied Excel analysis

MAHMUDUL HASAN

PROJECT SNAPSHOT

1,233	8.42M	5
ACTIVE EMPLOYEES	TOTAL SALARY	EXCEL CHALLENGES

From practical formulas to workforce analytics

An applied Excel portfolio featuring workforce KPIs, employee segmentation, interactive filtering, conditional formulas and Pivot Table reporting.
Based on an Ostad Data Analyst course assignment (Module 07).

PROJECT COMPONENTS

01 HR workforce dashboard and KPI interpretation

02 Delivery data analysis with Pivot Tables

03 SUMIF, COUNT-family functions and IF business logic

Portfolio case study | Educational datasets | Source-based findings
Prepared for LinkedIn professional project showcase

Interactive HR Dashboard

Active workforce metrics and employee segmentation

1,233	8,424,768	6,832.74
Employees	Total salary	Average salary

DASHBOARD PREVIEW

Figure 6. Interactive HR Workforce & Salary Insights dashboard.

Scope and filtering

The employee dataset contains 1,470 records. Dashboard KPIs focus on 1,233 employees with Attrition = No. Education and gender slicers support interactive workforce comparisons.

REPORTING NOTE

The source dashboard contains lower-chart labels referring to sales.
These labels require validation before interpreting them as salary trends.
Salary periodicity and units are not established in the source.

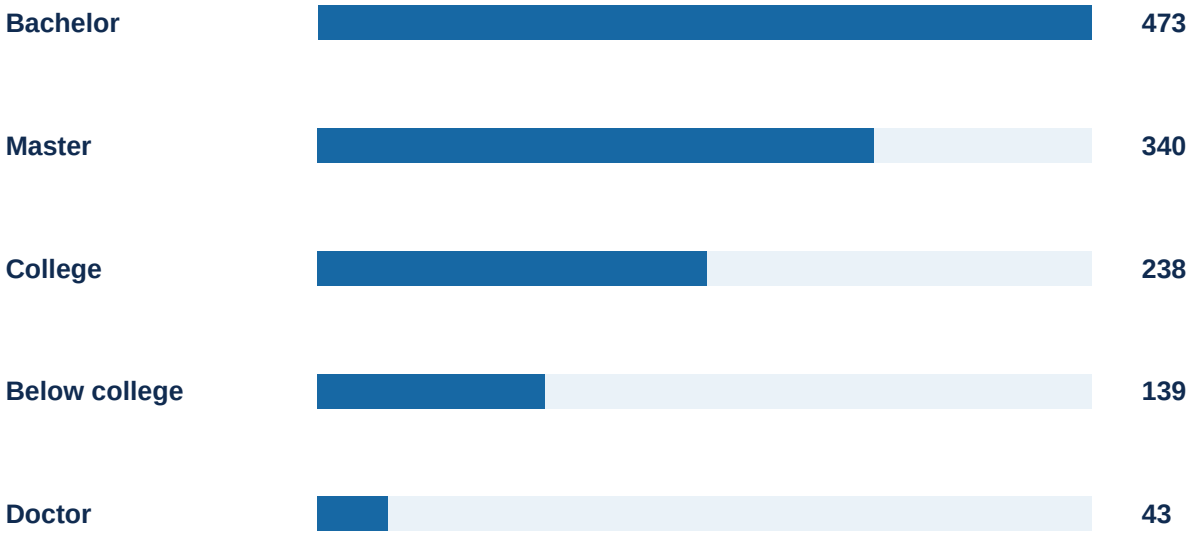

Workforce Composition

Evidence-based descriptive analysis

GENDER DISTRIBUTION

732	Male / 59.4%
501	Female / 40.6%

EDUCATION LEVEL

JOB SATISFACTION COUNTS

407	**369**	**234**	**223**
Very High	High	Low	Medium

Interpretation: Bachelor-level employees form the largest education group.

All distributions refer to the active-employee dashboard subset.

Delivery Data Analysis

Territory, category and brand summaries

9,362,570.65	Total delivered amount
6,959,725.50	Milk category
556,591.50	Diploma brand

PIVOT TABLE EVIDENCE

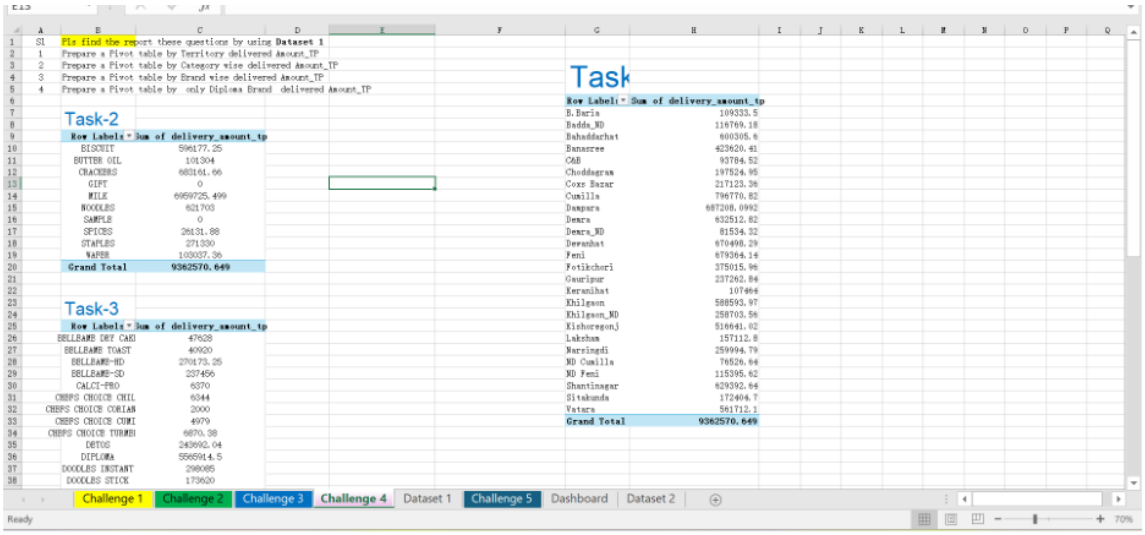

Figure 4. Territory, category and brand Pivot Table outputs.

Milk represents approximately **74.3%** of the total delivered amount. The Diploma brand accounts for approximately **5.9%**. These shares are descriptive, not evidence of profitability or growth.

Dataset: 14,026 delivery records. Milk represents about 74.3% of the delivered amount; Diploma accounts for about 5.9%. Delivered amount should not be interpreted automatically as sales revenue or profit.

Formula-Based Analysis

Repeatable logic, counting and conditional aggregation

IF / Target achievement

Sales > Target: Achieved; otherwise Not Achieved.

Commission is 10% only when sales strictly exceed target.

COUNT / COUNTBLANK / COUNTIF

Numeric observations: 10 and 7 across two exercises.

Blank cells: 3; occurrences of the value 10: 3.

SUMIF / Conditional sales totals

Month 12 sales: 600.

Tesla sales: 320 across four records.

PRACTICAL VALUE

These techniques support rule-based classification, completeness checks, conditional summaries and consistent reporting without manual recounting.

Findings & Next Steps

Skills demonstrated, limitations and quality controls

WHAT THIS PROJECT DEMONSTRATES

Interactive dashboard design with Pivot Charts and slicers

Workforce KPI reporting and employee segmentation

Multidimensional delivery-data summaries using Pivot Tables

Excel business logic using IF, COUNT, COUNTIF and SUMIF

QUALITY IMPROVEMENTS IDENTIFIED

Verify the two lower HR dashboard chart titles and their source measures.

State the salary unit and payment period explicitly.

Refresh Pivot Tables when underlying records change.

Record slicer selections when publishing filtered dashboard views.

Keep source data and analytical outputs on separate worksheets.

PROJECT CONTEXT

This is a skills-based case study developed from an Ostad Data Analyst Module 07 assignment. The results describe the provided practice data and do not represent findings from a real employer.
